# INVESTMENT COMMITTEE PACK

24<sup>th</sup> April 2018

**BLACKWOOD**  
ASSET MANAGEMENT

- 
- Attendees: MTR / RWF / SCG / SMG / TS / AR / AJ
  - PURPOSE:
    - This meeting performs part of BLACKWOOD's due diligence in ensuring the model portfolios continue to meet their investment objectives.
    - The aim of the meeting is to enable BLACKWOOD to:
      - discuss the main drivers of the markets and our sentiment on the different asset classes
      - to review the model portfolios
      - to discuss and decide on a course of action based on the preceding discussions detailing what needs to be done, by whom and by when
  - PROCESS:
    - economic/market metrics to be distributed to the committee 24hours before start.
    - content to be assembled during the month and added to the base document for discussing and refining at the meeting.

# MACRO OVERVIEW

The period leading up to the financial crisis saw an artificial boost to global productivity as western technology met the excess labour and resources of the developing world. This has now ended. A combination of aging demographics, and a lack of transformative innovations mean that productivity growth is below historic levels and will remain that way.

Given that, in the long run, productivity growth is the driver of economic growth (nominal GDP) this means that we are not going to be seeing interest rates rising to historic levels. Central bankers will be constrained in raising interest rates as any movement upwards in rates will act to stymie the low levels of GDP growth present. As a result interest rates will remain at 'zero' forever with low levels of inflation persisting.

This has important implications for the allocation of capital within the global economy. Interest rates are the pricing mechanism for an economy's capital stock. Low levels of interest rates keep so called "zombie" companies, which offer negative returns on capital, alive. This prevents the capitalist process of creative destruction that allows capital to be re-allocated to those tasks that generate the highest returns, in turn creating a self-reinforcing cycle of diminished productivity growth.

From the point of view of investors this means we cannot expect future returns to match those witnessed historically, and must remain aware of the increased risk, and opportunities, generated from the market inefficiencies caused by the misallocation of capital.

# TACTICAL POSITIONING

The model portfolios are currently positioned to hold a lower proportion of risk assets than the strategic (long term) asset allocation. We hold 12%-13% in cash, dependent on the model, and our debt holdings can be characterised as focusing on high quality sovereign debt. In terms of the equity risk, the model portfolios are underweight overseas equity and we have avoided alternatives assets such as private equity or Venture Capital Trusts (VCTs).

Broadly speaking global equity markets are expensive compared to historic levels. In the US, in particular, recent earnings growth has been driven in large part by companies increasing debt levels to fund equity buybacks. While this has been positive for short term returns, debt acts to makes companies less flexible and amplifies losses in a downturn (you cannot cut interest payments like you can dividends). In a similar vein the low interest rate environment has led to record levels of investor demand for private equity style investments in their search for return, exceeding the level of legitimate investments in the sector.

The models currently have no exposure to emerging markets. The standard investment premise for emerging markets is that economic growth is set to exceed that of the developed world, which will be translated into outsized returns for emerging market investors. This however fails to take into account the poor levels of corporate governance in emerging markets and the often limited access to the companies generating this economic growth. For investors this means being invested into a small number of large companies where risks are poorly understood and the returns do not provide sufficient compensation.

Where we do see the potential for greater shareholder returns is Japan. Japan has spent the last two decades dealing with the debt overhang from the asset price bubble of the late 80s early 90s, but is now beginning to emerge. Corporate governance is being reformed (the number of corporate scandals such as at Toyota and Mitsubishi have been falling) and corporate earnings are on the rise as companies traditionally run to be profitless are forced to take account of shareholders. We do not expect the reforms to be a quick process, but based on the progress seen to date we are comfortable taking a larger allocation to Japanese equity.

# FUND SELECTION

We structure our model portfolios almost entirely from passive funds. This reflects the evidence that actively managed funds cannot consistently beat the market (Cremers et al. 2014, Blake et al. 2015, S&P, 2014). This allows SORBUS to keep the underlying investment costs low and thus boosting the portfolio returns.

The occasions where SORBUS PARTNERS uses active funds represents a specialist market where markets are not efficient and an investment house is able to add value through their deeper understanding of market conditions.

## **active fund choices**

### *bond funds*

- TwentyFour Asset Management Monument bond fund
- TwentyFour Asset Management Dynamic bond fund
- AXA US High Yield short duration bond fund

### *Asia pacific equity funds*

- Invesco Perpetual Asian
- Stewart Investors Asia Pacific Leaders

# ACTIVELY MANAGED FUNDS

## TWENTYFOUR ASSET MANAGEMENT

TwentyFour asset management is a fixed income specialist that provides two of the externally active managed funds that the model portfolios invest in. They operate in niche market areas that offer benefits of diversification to client portfolios.

### **Monument Bond Fund**

This is a low risk bond fund that invests in a selection of floating rate asset backed securities (largely mortgage backed). The investments are plain vanilla (not a repeat of the subprime versions from 2008). As the fund invests in floating rate securities it naturally provides a degree of protection from rising interest rates.

### **Dynamic Bond Fund**

This fund is higher risk than the Monument fund. It operates on an unconstrained basis. It aims to provide an attractive level of income along with the opportunity for capital growth, by investing in a broad range of bonds and fixed income assets, including investment grade bonds, high yield bonds, government bonds and asset-backed securities.

### **Axa US High Yield short duration bond fund**

This fund provides a degree of further diversification for the model portfolios. Its use is to provide a risk adjusted approach to the high yield segment of the US bond market.

## ASIA PACIFIC EQUITY FUNDS

The Asia Pacific region (ex. Japan) is an example of an inefficient market. Both fund selection choices have a strong track record of outperformance against their peer group and against the FTSE Asia Pacific ex Japan indices.

## 5 YEAR PERFORMAMCE OF BLACKWOOD MODELS (BACKDATED)

note: all figures are net of DFM but net of fund manager charges

Blackwood Asset Management, Bloomberg.

Performance figures prior to the launch of the models on the 25/01/2018 have been derived based on the underlying index returns of the funds currently constituting the models and the strategic (long term) asset allocation for each model. Past returns are not a guide to future performance and this graph is not intended to set expectations of the potential future returns on the models. It is intended solely to provide information on the historic variance in the returns of the models. The actual asset allocation of the models at any time and for an extended period of time may differ significantly from the strategic asset allocations, reflecting the dynamic investment and market conditions.

# APPENDIX

# LEGAL NOTICE

This publication is for your information only and is not intended as an offer, or a solicitation of an offer, to buy or sell any investment or other specific product. Although all information and opinions expressed in this publication were obtained from sources believed to be reliable and in good faith, no representation or warranty, express or implied, is made as to its accuracy or completeness. All information and opinions as well as any prices indicated are subject to change without notice. At any time BLACKWOOD ASSET MANAGEMENT and other companies in the SORBUS PARTNERS LLP group (or employees thereof) may have a long or short position, or deal as principal or agent, in relevant securities or provide advisory or other services to the issuer of relevant securities or to a company connected with an issuer.

Past performance of an investment is not a guide to its future performance. Some investments may not be readily realisable since the market in the securities is illiquid and therefore valuing the investment and identifying the risk to which you are exposed may be difficult to quantify. Futures and options trading is considered risky and past performance of an investment is not a guide to its future performance. Some investments may be subject to sudden and large falls in value and on realisation you may receive back less than you invested or may be required to pay more.

Changes in foreign exchange rates may have an adverse effect on the price, value or income of an investment. Please note that BLACKWOOD ASSET MANAGEMENT or its employees can at any time buy or sell products mentioned in this publication, including derivatives on such products. This publication may not be reproduced or copies circulated without prior authority of BLACKWOOD ASSET MANAGEMENT.
